Principal's Message

“A dream does not become reality through magic. It takes sweat, determination and hard work.”

Everything was normal when the year started in 2020. Teachers and students were busy in daily schedule and organizing academic activities but it was beyond imagination that Corona Virus (COVID-19) pandemic started which created disturbance and turbulence in professional and personal lives. During this time, the school has made extensive arrangements to conduct effective online classes. What's app groups and other digital means are formed to clear the doubts of students. Our talented and ever-willing staff have been showing their care and concern for the students, working from home, preparing notes and engaging online classes for the benefit of students.

A lot of effort has gone into making the lockdown period productive. Like every year, we conducted co-curricular activities in KIDS CASTLE such as Calligraphy, Rakhi making, Non –fire Cooking, Helper's Day etc. Our tiny tots participated enthusiastically in all the celebrations and made it memorable. Beyond academic middle school children also participated in various celebrations and competitions willingly and proved that virtually they can also utilize the best of their time.

The virus also prompted all of us to gain a heightened self-awareness. No matter what the situation is one must be open to new challenges.

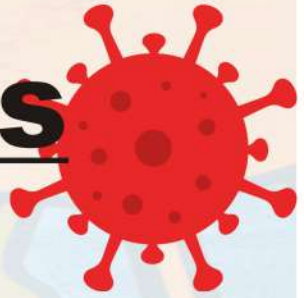

It is a tough time for the entire humanity which will certainly pass soon by grace of God. It is said –

“Hope is being able to see that there is light despite all of the darkness.”

I anticipate your consistent support and cooperation.

**Principal
Dr.(Mrs.)Pratibha Asthana**

Corona Thoughts

**It is the cause for our worldwide pause
I sit and think
How our lives changed in a blink
Amidst it all
Is this a wakeup call?**

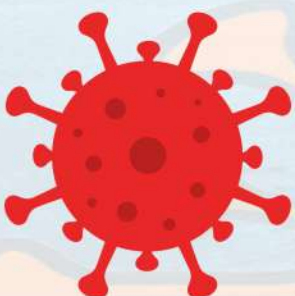

**Is this a total negative?
Or just a temporary sedative
Does God need to interject ?
So His creation can reflect**

**As we lose some stability
Do we gain some humility?
If we feel we're in total control;
Does this not take a harder toll ?**

**I've noticed through it all
Families outdoors throwing a ball
Couples are walking
Maybe doing more talking**

**Sometimes in the disaster
We can remember who the Master
Maybe that's a good perspective
That keeps us grateful and reflective**

**I do not make light
That many will lose to this fight
For families left behind
May we show up, may we be kind**

**Pavitra Asthana

COVID-19

- COVID-19 is the disease caused by the new coronavirus that emerged in China in December 2019. COVID-19 symptoms include cough, fever or chills, shortness of breath or difficulty in breathing, muscle or body aches, sore throat, loss of taste or smell, diarrhoea, headache, fatigue, nausea or vomiting, congestion and runny nose. COVID-19 can be severe, and some cases have caused death.

- The new coronavirus can be spread from person to person. It is diagnosed with a laboratory test. There is no coronavirus vaccine yet. Prevention involves frequent hand washing, coughing into the bend of your elbow, staying home when you are sick and wearing a cloth face covering if you cannot practice physical distancing.

Test for detecting the virus

- **Antibody test:**-After a person is infected, he or she typically develops antibodies. Antibodies are found in the bloodstream and in body secretions, such as saliva. The antibodies that are most important in SARS-CoV-2 are called *IgG* antibodies. *IgG* develops 10–14 days after a person is infected. Antibody tests of the blood (and in some cases, saliva) can detect whether the antibody is present or not. A positive antibody test is evidence that the person had SARS-CoV-2 infection

- **PCR test:**-Short for *polymerase chain reaction*. A PCR test is a diagnostic test that identifies virus in the body. SARS-CoV-2 has DNA and RNA sequences that are unique and specific to the virus

Fighting the Virus

- **Isolation:**-Condition in which a case is separated from others. Isolation occurs under conditions (for example, having a private bedroom and bathroom) that will prevent or limit the transmission of an infectious agent to those who are susceptible. Cases should be isolated for the entirety of their infectious period.

- **Quarantine:**-Condition in which a contact's activities are restricted. The contact is separated from others to prevent onward disease transmission to those who are susceptible. Contacts should be quarantined for the duration of their incubation period

India Fights Corona

- The Janata Curfew was a 14-hour curfew on 22 March (from 7 a.m. to 9 p.m.). Every person was required to obey the curfew, with exceptions for people of "essential services" such as police, medical services, media, home delivery professionals and firefighters.

Online Study & My Experience

Kirti Dwivedi

Online education is a flexible instructional delivery system that encompasses any kind of learning that takes place via the internet. Online learning gives educators an opportunity to reach students who may not be able to enroll in a traditional classroom course and supports students who need to work on their own schedule and at their own place. Online education has become a viable and exciting method for instructional delivery in the global business society that runs on a 24/7 schedule because it provides students with great flexibility. Studies have also shown that students learn just as effectively in an online classroom as they do in the traditional classroom.

This global pandemic has forced us to opt for online study apart from the traditional one as everything has its two phases; the same is with the online study too. On one hand, where it has made the students to learn, to become responsible for their own education with information available at their fingertips as well as they find the submission of assignment easy and convenient where as on the same hand, they may miss the face -to-face interaction with their teachers and among students and network issues become an interruption during their online classes. But as it is said “Necessity is the mother of invention” so during this tough time ,most of the schools have to start the learning via internet and in the future ,it is obvious that the traditional learning would be converted into online one. My school had also started the online learning process since the new session started and the online classes are being conducted regularly resulting in the completion of about 70 to 80% of syllabus in each subject .There is much difference in learning online and offline and under the proper guidance and supervision, our mentors are keeping us busy with lectures, providing assignment for better learning prospects. So online study has brought lots of positive changes in my life which will be fruitful for my career.

The Time We Live In

The office is empty
Most working from home
Many with loved ones
Yet some on their own

The desks are abandoned
I wish you were back
I so miss your faces
The banter the craic

I feel for our operatives
On the front line
Cleaning hospitals, clinics
It's not a nice time

Shivansh Trivedi
Class-XII

Our many non nationals
Are far from their home
Away from their family
Frightened, alone

We will beat Corona
And see her retreat
And life will be normal
And life will be sweet

Look after each other
Be gracious and share
Be thankful for people
Who love you and care.
